Name: Shout**Summary:** Syntax highlighting as you type**Author:** Tween**Owner:** Andy Tween <amtween@hotmail.com>**Description:**

Syntax highlighting that dynamically changes as you edit a method. After each key stroke (or other change) the code is parsed and the syntax highlighting updated so that it is in sync with the current method source.

Categories:

Development tools - *Add-on development tools for Squeak.*
 Licenses/SqueakL - *The license of Squeak from Apple. The only license we allow for inclusion in base Squeak.*
 Maturity level/Alpha - *Useable by daredevils. Probably still full of bugs.*
 Package group/Non official package - *Just a package for Squeak. no community guarantees. :)*
 Squeak versions/Squeak3.7-gamma - *This is the current moving target of 3.7.*
